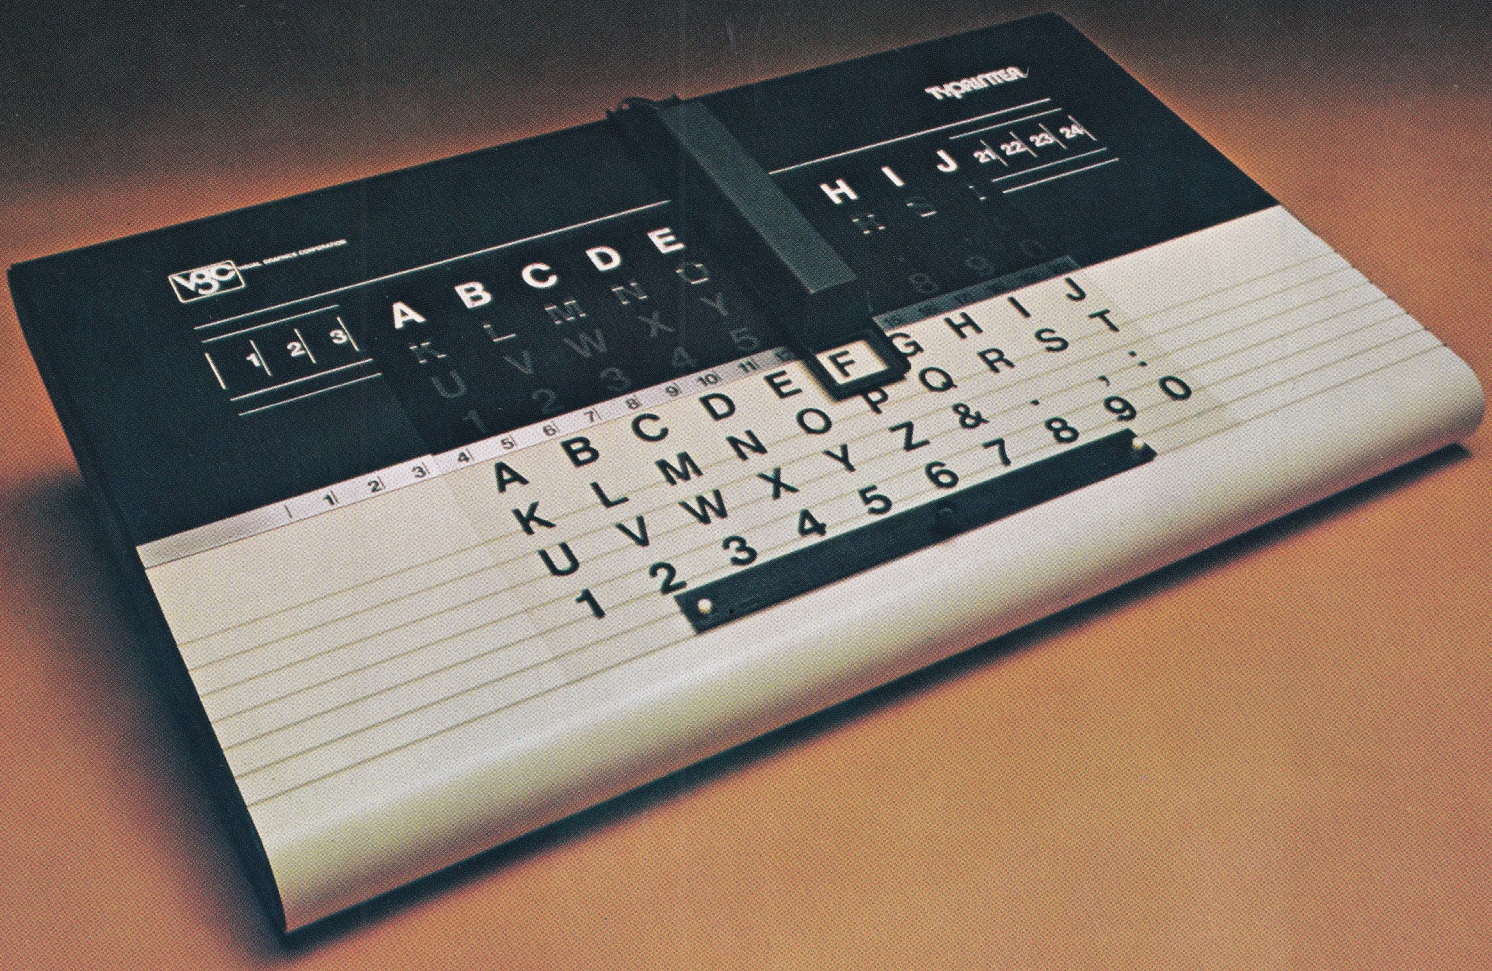
VISUAL GRAPHICS' NEW
LOW-PRICED TYPRINTER® 20
TYPRINTER

Typrinter 20: The Portable, Economy Headline Phototypesetting Machine That's Fast, Easy And Fun To Use!



Here's a brand new way to get all the large-size quality type you need, for pennies per word! It's the Typrinter® 20—another quality unit from Visual Graphics Corporation, the most famous name in display phototypesetting.

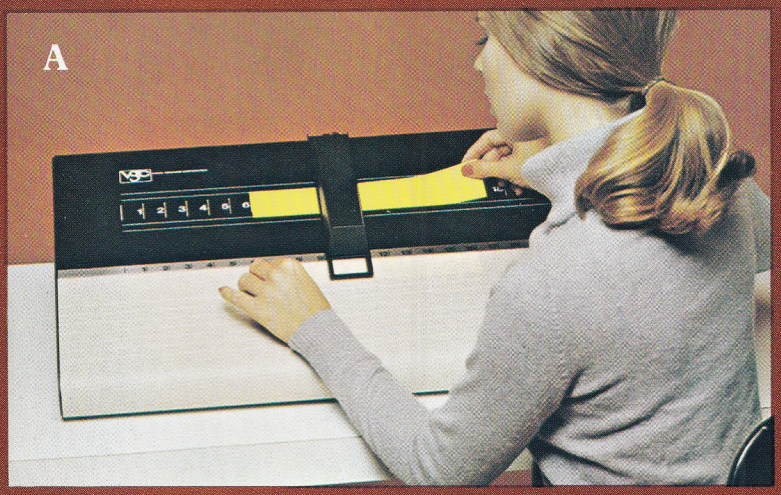
With a Typrinter on hand you'll never run out of headline type. You'll never again have to mess with stick-ons, rub-downs or cut-outs, nor the cracking, peeling and running out of letters that goes along with them.

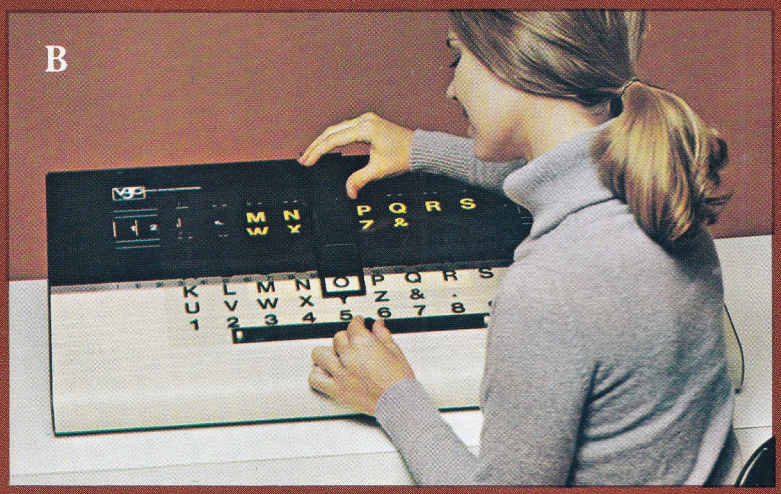
Using the Typrinter is easy as A, B, C. It works in normal room light. It sets type of the highest quality.

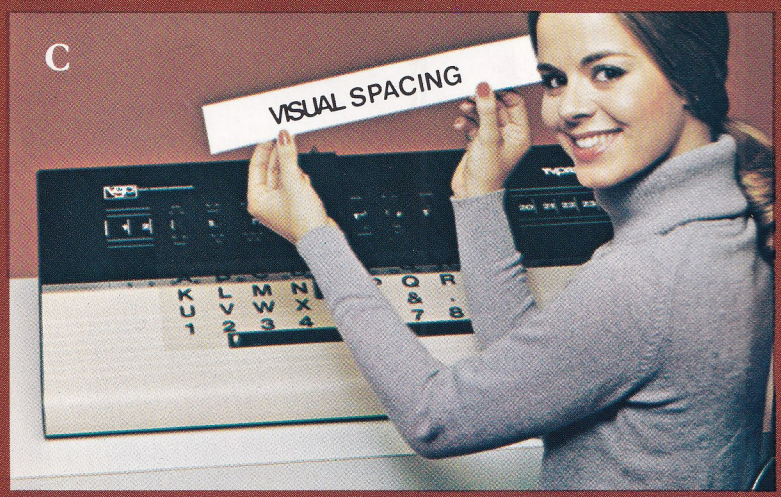
A unique new "instant image" spacing paper lets you see each letter as you print it, for perfect visual spacing and precise word length control. And there's a new ultraviolet strobe exposure module that's simple—and a pleasure—to use.

Best of all, anybody in your shop or office can produce professional-looking type after only a few minutes simple instruction. And the unit is amazingly low-priced, so you can actually afford to own several—for faster turnaround time and increased production.

The Typrinter 20—marvelous-looking, and a simply wonderful new way to make quality headlines quickly and economically!







WITH A TYPRINTER ON HAND YOU'LL NEVER RUN OUT OF "A"s OR "E"s OR HEADLINE TYPE. IDEAL FOR MECHANICALS, PRESENTATIONS, AUDIOVISUALS, SIGNAGE.

- Full daylight operation. No darkroom or plumbing.
- Uses unique low cost new film fonts in display sizes.
- Letter spacing visible as each letter is set.
- Visual spacing for complete control.
- Exclusive new ultraviolet strobe exposure module is fast and simple to use.
- Exciting contemporary design. Lightweight and portable, too.
- Self-contained, with ample storage space for fonts, paper, etc.
- Comes complete and ready to use. Nothing else to buy.

HERE'S HOW EASY IT IS TO SET YOUR OWN HEADLINES:

A) Place ultraviolet sensitive photo paper and "instant image" spacing paper on the exposure plane.

B) Cover both with exclusive film font.

C) Expose one character after the other with dual strobe flash to form the words you want. Space the letters visually using "instant image" characters as a spacing guide. Set loose or tight, kern or overlap as you go, or use pica guidelines for equal letter spacing. New strobe exposure module operates quickly, simply and easily. Full visual spacing provides complete word length control. See what you set as you set it.

D) After processing, the type is ready for use. All operations take place in normal room light.

$350.—
font $10.
